## DIY Hack: Super nice drawers in no time at all!

### You will need...

- One roll of d-c-fix<sup>®</sup> Rio Ocean
- Processing set d-c-fix<sup>®</sup> with squeegee and cutter
- Measuring tape
- Pencil
- Scissors

#### Step 1

First you take the drawer out or disassemble it - and determine the internal dimensions of the base plate.

#### Step 2

Then you transfer the base plate measurement to the back side paper of the adhesive foil and cut out the foil piece.

#### Step 3

Before gluing, make sure that the bottom panel is clean and remove any dirt residues - if you work with a damp cloth, make sure that the drawer bottom is completely dry again.

#### Step 4

To apply the film, peel off the back of the film a little and place the film on two outer corners of the drawer - then use the squeegee to apply the film centimetre by centimetre across the base plate. Ready!
